Course Overview

We are excited to announce our Distance Learning Combo Course Offerings! Applications are much more complicated than we give them credit. The developers behind the apps we use must consider the front-end user experience, the back-end functionality, and everything in between. The Application Developer credential gives you that breadth of knowledge to make valuable contributions and informed decisions, no matter what part of the development you focus on. If you want to establish a career that is stable and pays great, become an application developer by earning your Application Developer credential.
